### FERPA Requirements Information

Like many other government regulations, there's no formal compliance auditing or certification process. It's left to the schools and universities to ensure that their IT systems and practices are FERPA-compliant. The documentation, webinars, and videos to help schools get familiar with FERPA and inform education IT professionals on security best practices and FERPA compliance.

- **Policy and governance:** Develop a comprehensive data governance plan that outlines organizational policies and standards regarding data security and individual privacy protection.
- **Personnel security:** Create an Acceptable Use Policy that outlines appropriate and inappropriate uses of internet, intranet, and extranet systems.
- **Physical security:** Make computing resources physically unavailable to unauthorized users. This includes securing access to any areas where sensitive data are stored and processed, such as buildings and server rooms.
- **Network mapping:** Network mapping provides critical understanding of the enterprise (servers, routers, etc.) and its connections.
- **Inventory of assets:** The inventory should include both authorized and unauthorized devices used in your computing environment. Usually checked by an automated system monitoring device.
- **Authentication:** The ways in which someone may be authenticated fall into three categories: something you know, something you have, or something you are. Two-factor

Once logged in as a student you can fill out the form to request for your group project server space, you can also ask for additional space if necessary.
